# CRUD Operation
# with C# and Dot Net Core API

Suppose you have a Database **dbAkijFood** with a table named **tblColdDrinks**. tblColdDrinks contains 4 columns: **intColdDrinksId**(Identity Column), **strColdDrinksName**(nvarchar), **numQuantity**(decimal), **numUnitPrice**(decimal)

| tblColdDrinks | | | |
|---|---|---|---|
| **intColdDrinksId** | **strColdDrinksName** | **numQuantity** | **numUnitPrice** |
| 1 | Clemon | 450 | 20 |
| 2 | Frutika | 500 | 25 |
| 3 | Speed | 600 | 30 |

**API 01:** Insert Mojo (Quantity 575, Unit Price 15)

**API 02:** Update unit price of Futika to 35

**API 03:** Delete Speed from the table

**API 04:** Find remaining products name

**API 05:** Delete All products if it's quantity is less than 500

**API 06:** Find total price of all products
